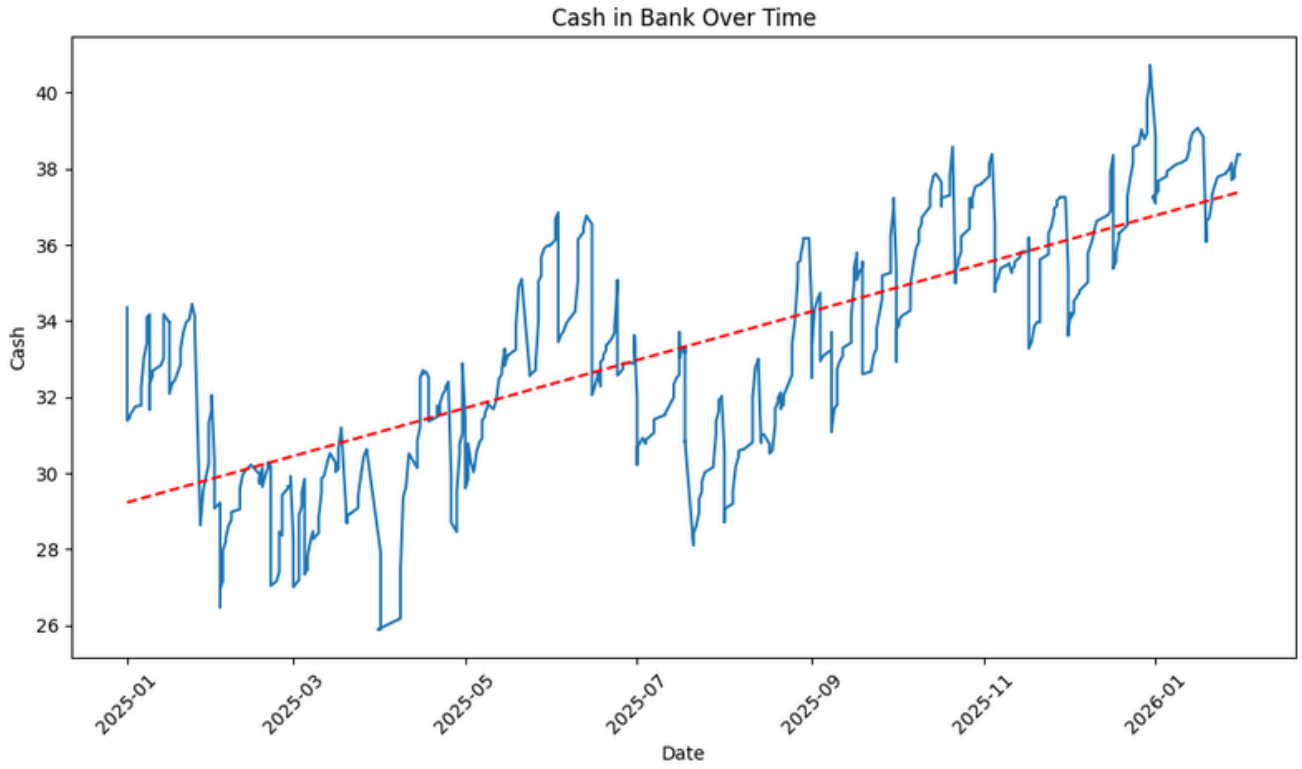
PROGRESS REPORT

PREPARED BY: CLIVE MARVELOUS

Disclaimer: This analysis is based on incomplete historical data as the business ceased operations. The report is intended to demonstrate analytical approach rather than provide final business recommendations.

CUMULATIVE REVENUE



34.35 +11.7 % 38.38

2025-01-01 2026-01-01

Insight:
Cumulative revenue shows a clear upward trend, growing at approximately 20,659 per day based on linear regression. However, short-term fluctuations suggest variability in monthly performance, indicating unstable revenue streams despite long-term growth.

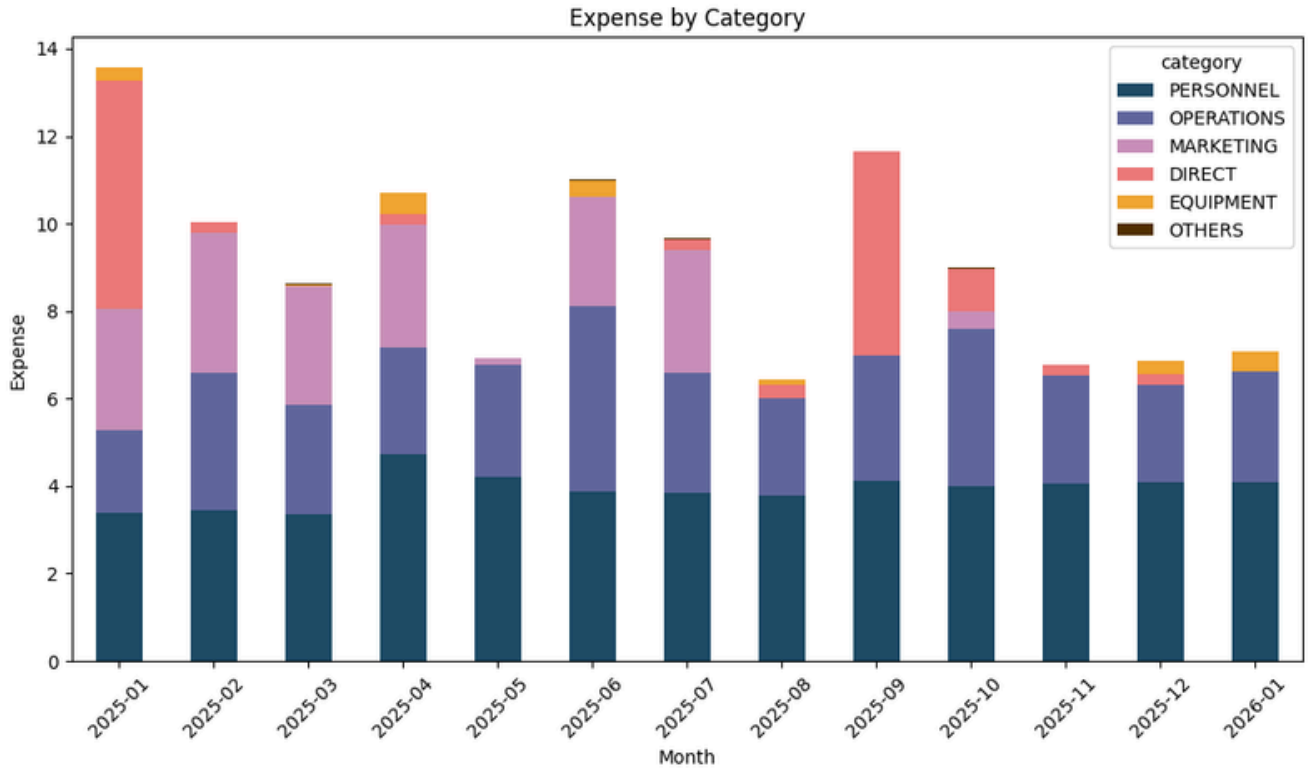
INCOME

Insight:

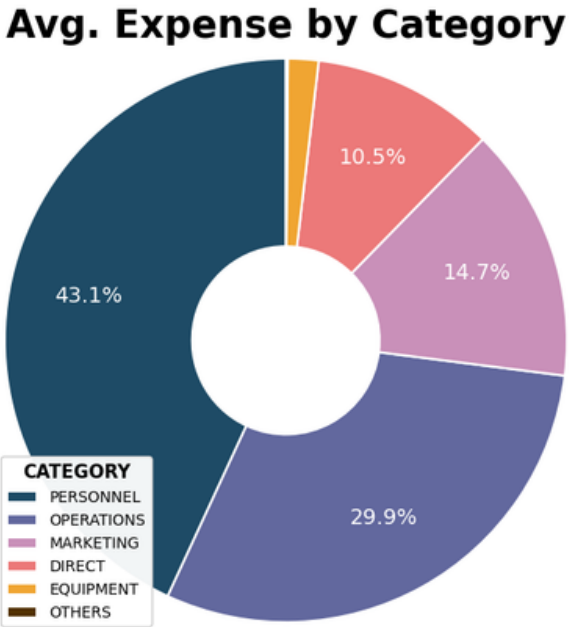
1. Monthly income shows significant fluctuations, with a 59.5% decrease from Jan 2025 to Jan 2026.
2. This suggests inconsistent demand and potential seasonality, although additional historical data is required to confirm cyclical patterns.

Statistics	
Mean	9.41
Standard Dev.	2.36
Minimum	4.57
Maximum	12.97

EXPENSE



Statistics	
Mean	9.10
Standard Dev.	2.25
Minimum	6.43
Maximum	13.58



Insight:

1. Personnel and operational expenses remain relatively stable across months and are therefore treated as fixed costs for this analysis. They take majority of the monthly costs (73%)
2. The estimated monthly fixed cost is 6.65, providing a baseline for evaluating profitability.
3. This assumption may require validation with a longer dataset.

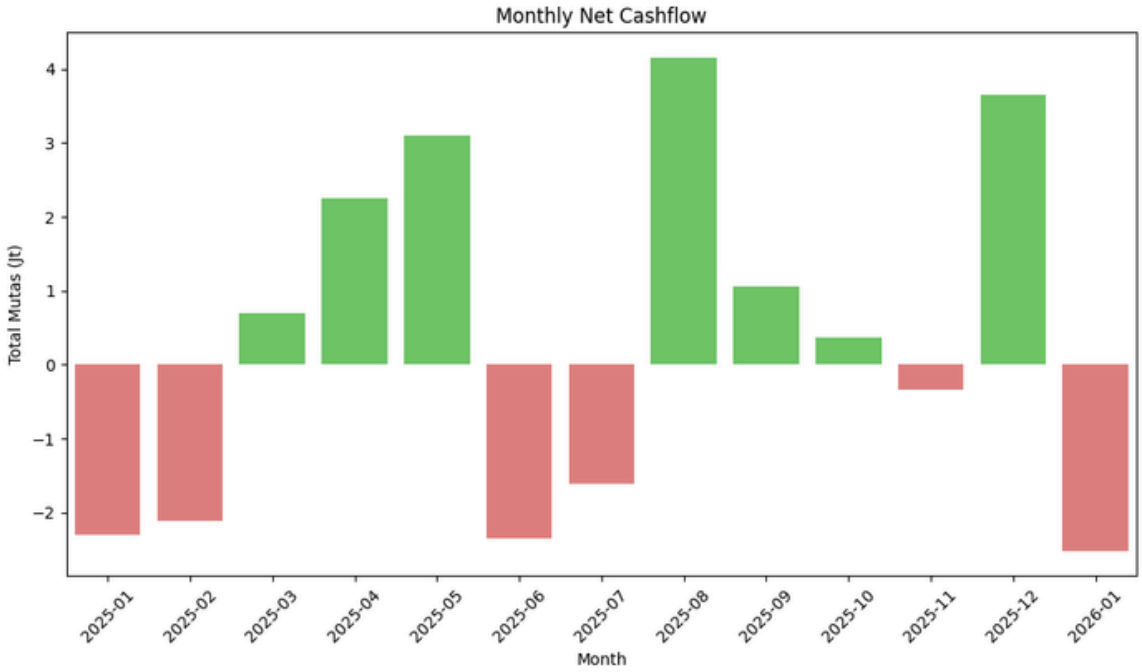
MARKETING

Insight:

- Average revenue is slightly higher during periods with marketing spend (9.65 vs 8.72).
- However, the increase (~0.9 per month) appears marginal relative to the average marketing cost (~1.33).
- This suggests that current marketing efforts may not be cost-effective. Further analysis (e.g., lag effects or campaign-level data) is required before drawing definitive conclusions.

Marketing Spending Stats.	
Mean	1.33
Standard Dev.	1.42
Minimum	0
Maximum	3.2

NET CASHFLOW



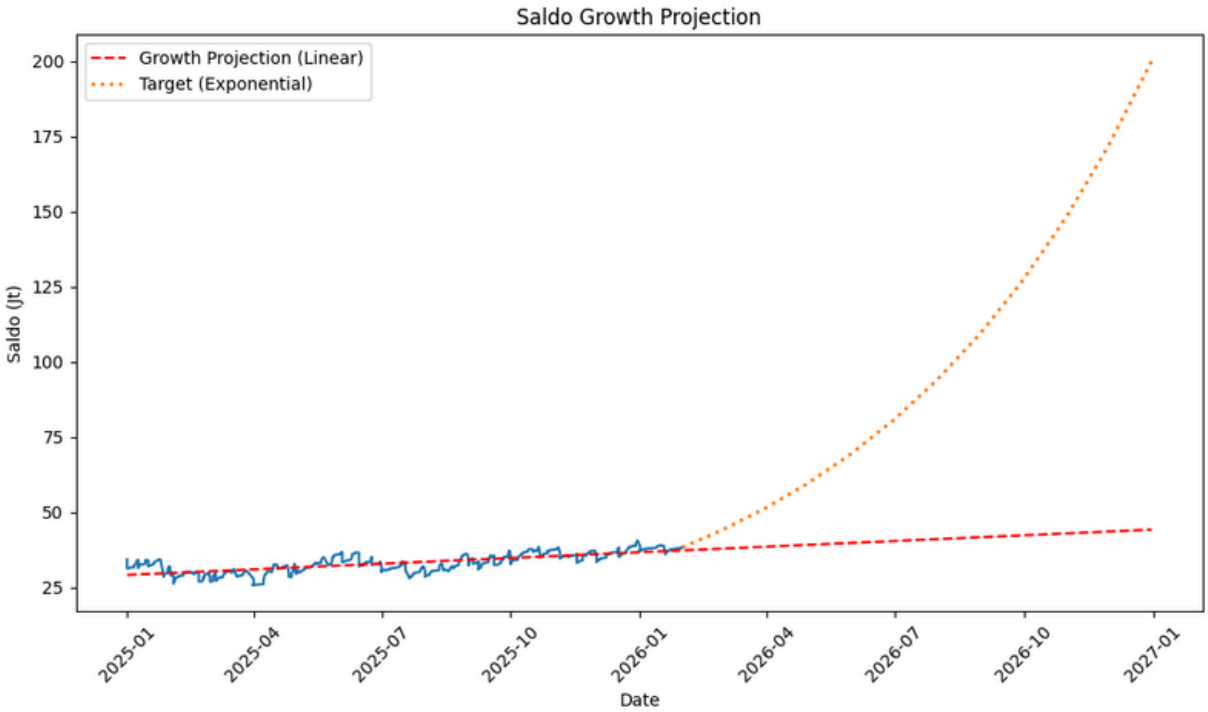
Statistics	
Mean	0.31
Standard Dev.	2.42
Minimum	-2.12
Maximum	4.16

Insight:

- The business generates a positive average monthly cashflow (0.31), indicating overall growth.
- However, total annual net cashflow (4.03) is low, suggesting slow and unstable profitability.
- Cashflow is highly volatile, with strong months (May, August, December) offset by losses in others (January, February, June). This pattern suggests possible seasonality.
- Additionally, variability is higher in positive months than negative months, indicating inconsistent revenue spikes rather than stable growth.

Implication:
The business should focus on stabilising revenue and reducing losses during weaker months.

GROWTH PROJECTION



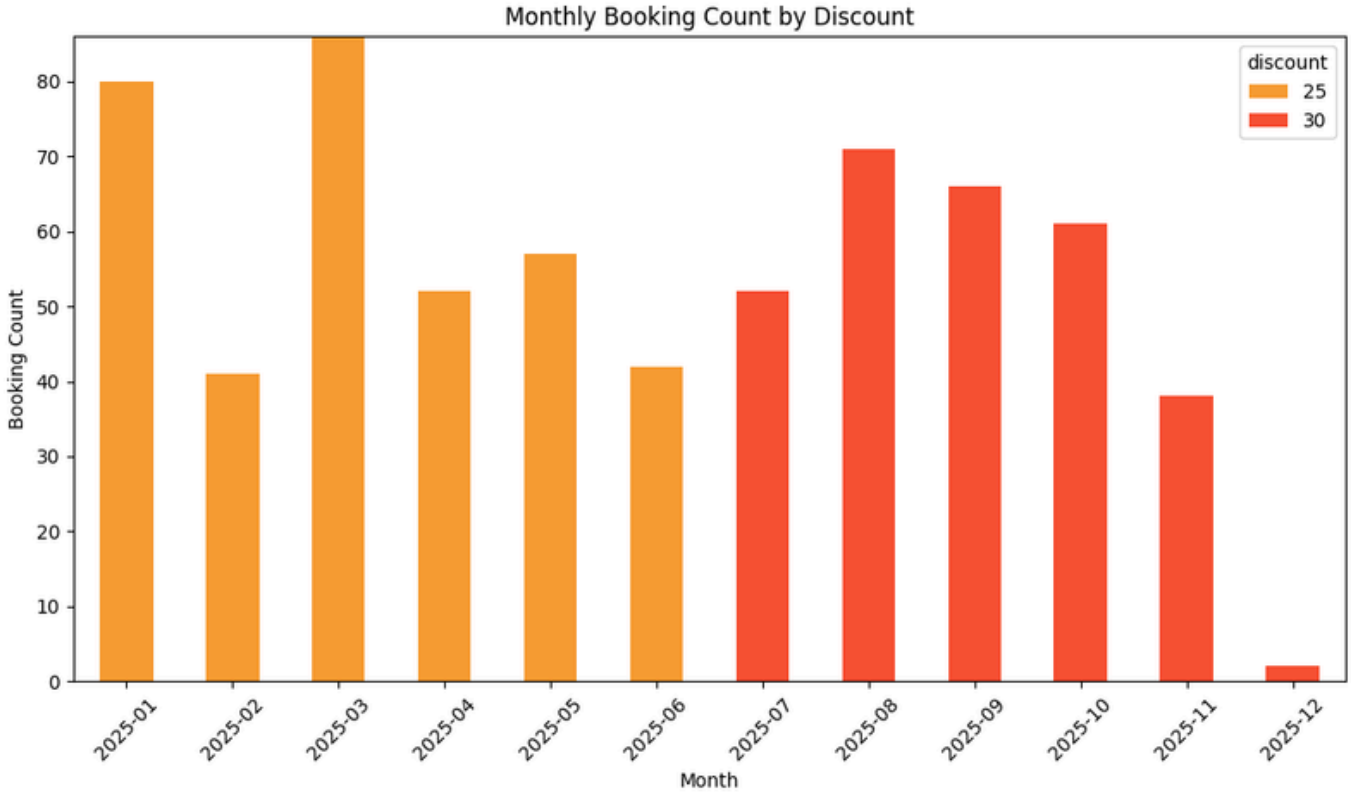
Insight:

- Under the current linear growth model, cumulative revenue is projected to reach only 44.29, far below the target of 200.
- To achieve this target, the business would require an exponential growth rate of ~14.8% per month, which is significantly higher than current performance.

Implication:

- A substantial change in business strategy is required to close this gap.

DISCOUNT



Monthly Booking Counts by Discount

DISC	0%	25%	30%
Mean	28.8	29.8	24.2
Std	11.8	33.7	30.5

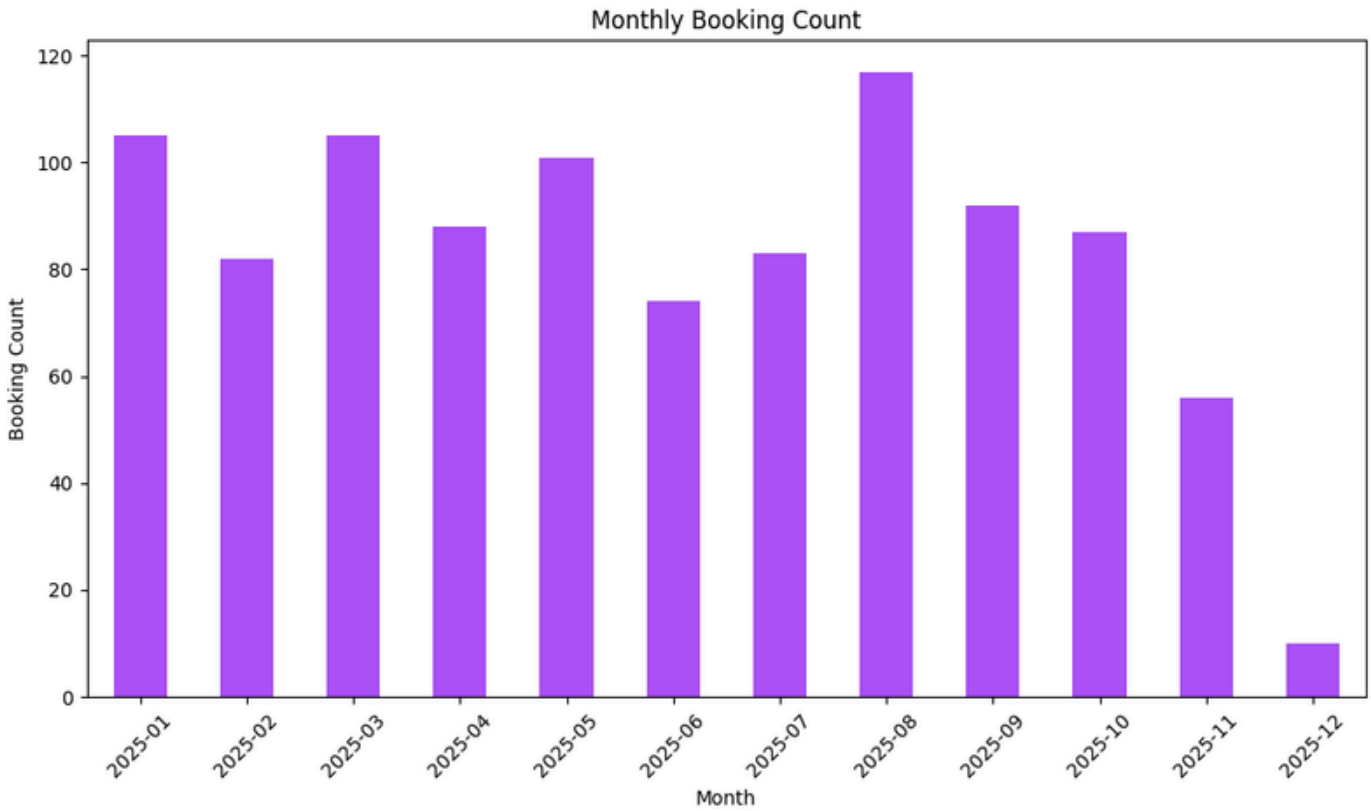
Insight:

- Higher discount levels are associated with increased booking volume.
- However, a 5% increase in discount results in only ~2.5 additional bookings per month, raising concerns about profitability.

Implication:

- The business should evaluate whether increased volume compensates for reduced margins.

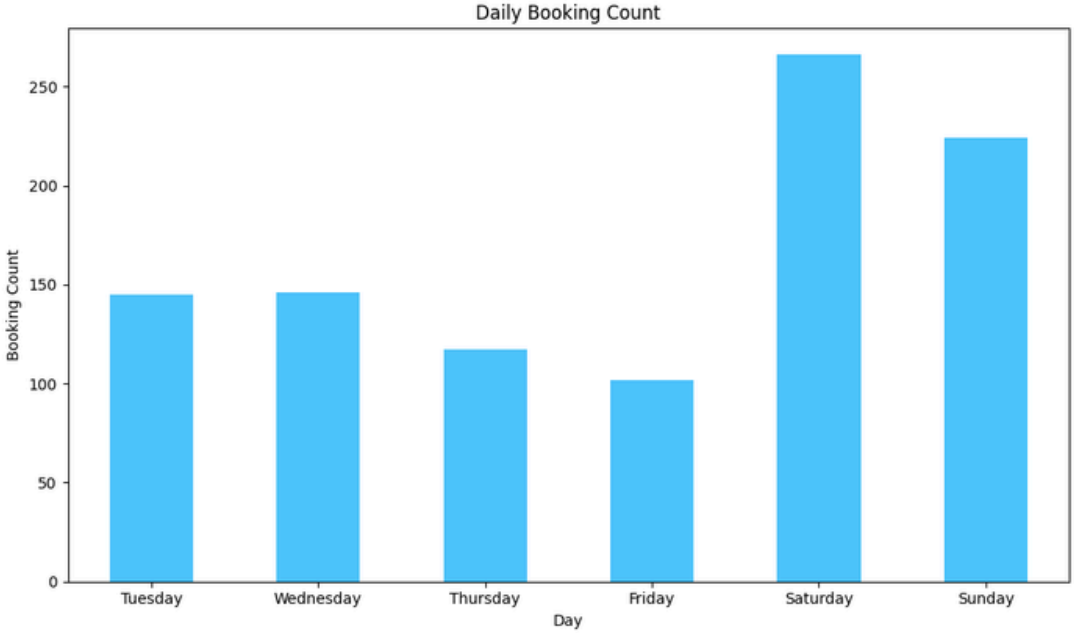
BOOKING COUNT

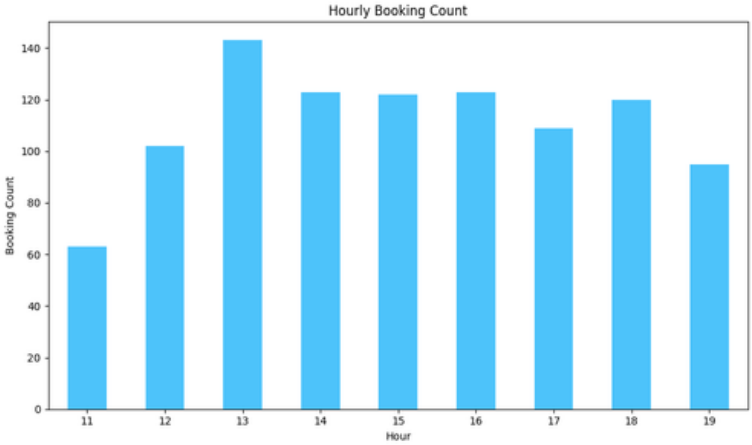


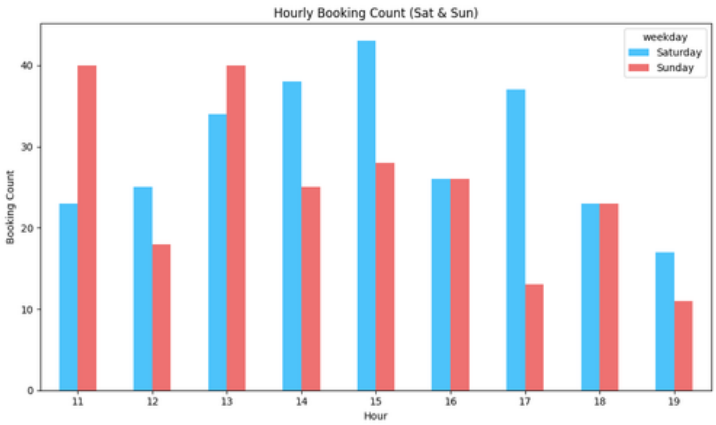
Insight:

- Booking trends closely mirror revenue patterns, confirming that bookings are the primary revenue driver.
- A high proportion of bookings (83.5%) are made online, indicating efficient and trackable customer acquisition channels.
- The relatively low walk-in rate suggests limited spontaneous demand.

DAILY & HOURLY BOOKINGS







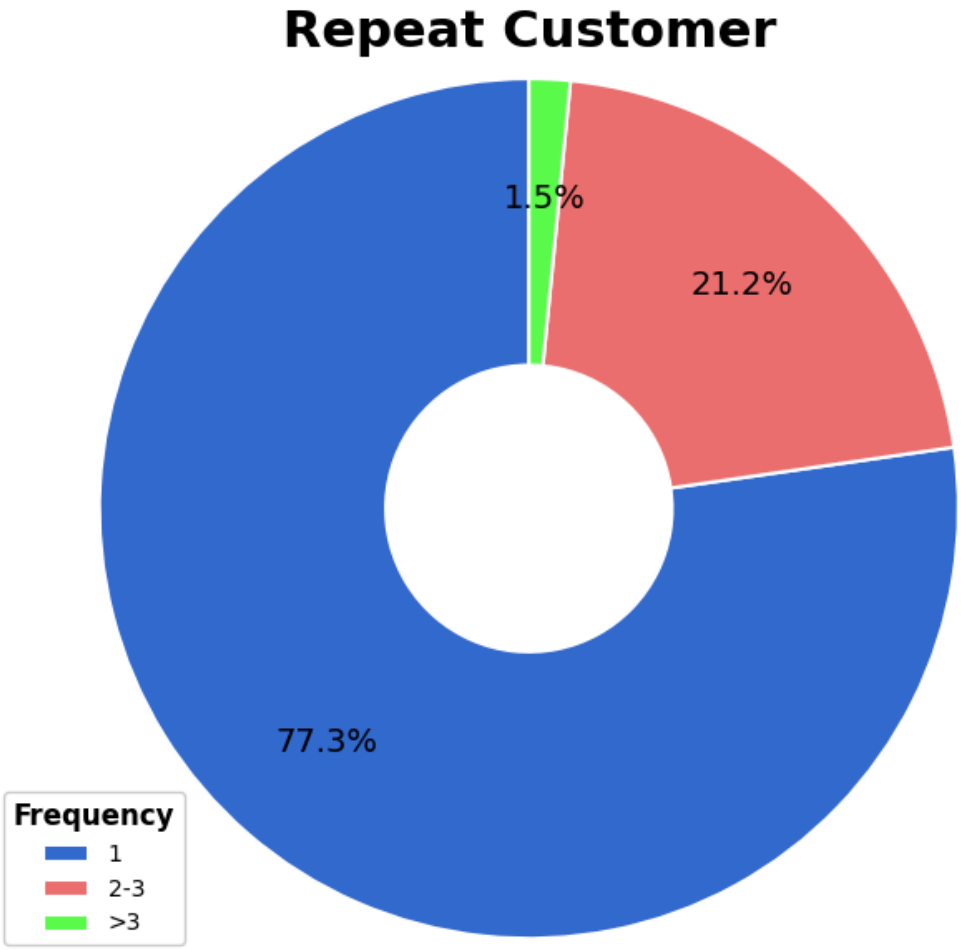
Insight:

- Booking activity peaks on weekends, particularly Saturday and Sunday.
- On Saturdays, demand peaks in the afternoon (14:00–15:00) before gradually declining.
- On Sundays, demand starts strong in the morning (peak at 11:00) and declines throughout the day.

Implication:

- Staffing and resource allocation should be optimised around these peak periods.

REPEAT CUSTOMERS



Insight:

- The majority of customers are one-time visitors, with a low proportion of repeat customers.
- This indicates weak customer retention, which is critical as customer acquisition is typically more expensive than retention.

Implication:

- The business should prioritise strategies to increase repeat visits (e.g., loyalty programmes or targeted promotions).
